There are various photo editing programs such as Adobe Photoshop which you can use to edit and manipulate photos. But if you wish to make speedy and reliable edits on your photos, then you need to use a tool to edit your photos which is affordable in price and is reliable. While browsing through some of the best software to edit your photos, you will find Lightroom- it is a very user-friendly and a powerful program. The program is pretty basic compared to other photo editing software. But it has a very powerful photo editing feature. The main goal of Lightroom is to edit, organize and share your photos and you cannot do this job in any other tool. The editing for photo functioning of the program is quite simple and easy. You don't even need a solid knowledge of photo editing to make changes to photos through Lightroom. You can easily do basic editing such as adjusting shadows, light, contrast, vignetting, saturation, brightness, and editing the color levels and your pictures are ready and you can share them to social media sites such as Facebook, Instagram, YouTube, Twitter etc. The main purpose of the program is to edit the photos, that is why this software is known as a photo editing program. Editing photos need to be handled with utmost effort and accuracy, so these programs generally come equipped with many different options and features. There is a downside to working to improve one's software in general. A lot of information has to be kept between the lines to the developers. I am sure that there's been a lot of "behind the scenes" tweaking to this new release of Photoshop that I am unaware of. This could include performance enhancements, underlying programming changes, and other tweaks. For this review, I didn't look too closely to see what they changed (I think I might have for the review of Lightroom 5). In the end, Photoshop will still be a great tool for most people. However, I do expect some shake-ups and new wrinkles to show up in the next few major releases of the suite.
